

Item / Repair Status Data Flow for Thermal Items in Lean

You create Items and the associated “Repair Status” or Change the Repair status on a Item on the item tab. You can view the different entrees on the History tab and select which one you want to view the specific details for on the History tab. By default the last entry will be the one that is always shown if you just jump to the Detail tab.

Note: There are no IR or Photos for “Schedule Repair or Repair Made” since they are work orders that are create against a Item.
